WINDOWS WITH
BUILT-IN SMART
CAPABILITY**

ABOUT LEGACY PROTECT

Sliding sash windows have been a staple of UK architecture for more than 300 years, valued for their elegant proportions, authentic detailing, and ability to suit both historic restorations and modern builds inspired by tradition.

While the design has stood the test of time, the way we think about home security has changed over time.

Today, homeowners want more than robust locks and quality craftsmanship. They want certainty. The ability to know - instantly - that their home is secure.

That's where **Legacy Protect** comes in.

A smart security system designed specifically for sliding sash windows, powered by Kubu smart sensors, giving you real-time visibility of your window status in the Kubu app - without changing how they look, feel, or function.

WE ALL KNOW THE FEELING...

You've left the house, you're halfway down the road, and then it hits you:

"Did I close the windows?"

Legacy Protect is designed to remove that moment of doubt entirely. With our **LastCheck** feature, you can check every window at a glance and mark your home as secure with a single tap. No more turning the car around.

INTELLIGENT SASH WINDOWS

Your Legacy sliding sash windows are supplied **smart-enabled as standard**, ready to be fitted with Kubu sensors whenever you choose.

Once the smart sensors have been activated, your windows become part of a connected smart home system giving you simple, real-time updates on security and much more through the Kubu app.

The Kubu app works wherever you are - with a Kubu Home Hub required for full remote connectivity when away from home.

WHAT THE KUBU APP DOES

The Kubu app gives you clear, real-time visibility of your windows and doors - wherever you are.

You can...

Be alerted to unusual activity, including any potential break-in attempts.

Set helpful reminders, including when it's time to open your windows for fresh air.

Stay informed about external conditions such as bad weather or high pollen levels.

Set reminders to warn you of open windows before leaving home.

See if your windows are left open or closed.

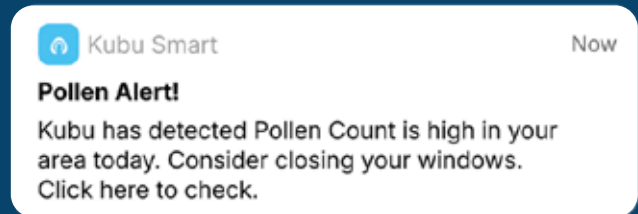

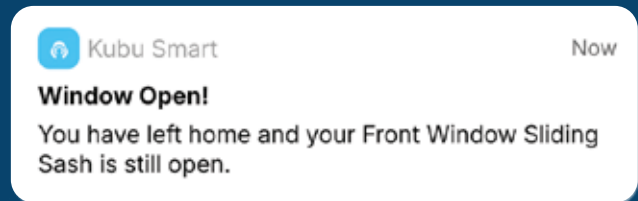

Get notified of unwanted sash movement, so you can enjoy fresh air with confidence.

With the Kubu app you get gentle reminders that make a big difference.

-  A simple notification at bedtime that everything is secure.
-  A prompt when you leave home and something's still open.
-  A quick reminder to close windows if it's raining or when pollen levels are high.

And in the unfortunate event of a break-in attempt, you're alerted instantly - helping you stay informed and act quickly.

BUILT FOR BUSY LIVES

Homes are busy places - mornings, school runs, work, guests, pets, deliveries.

It's easy for windows to slip your mind in the rush of everyday life.

Legacy Protect quietly steps in to give you clarity when you need it most, without adding complexity when you don't.

SMART SECURITY BUILT INTO THE WINDOW

From June 2026, all Legacy sliding sash windows are manufactured to work with Kubu as standard - with compatible magnets built discreetly into the frame during manufacture, and pre-defined sensor positions on the sash.

The foundation for smart security is already in place. When you're ready, the Kubu sensor simply fits to the sash - nothing visible, nothing intrusive, nothing that affects the traditional look of the window.

RESPECTING THE DESIGN

Sash windows are often chosen for their character - especially in period properties, conservation areas, and design-led new homes.

That's why **Legacy Protect** has been designed to be completely hidden within the finished window.

From the outside, nothing changes.

From your perspective, you gain reassurance.

SECURITY YOU TRUST, MADE SMARTER

Your sash windows still rely on proven mechanical security:

- ✓ Robust locking mechanisms as standard.
- ✓ Multi-point locking where required.
- ✓ Accredited PAS24 (Doc Q) security upgrade.

Legacy Protect doesn't replace any of this. You still lock your sash windows as normal. You still use your keys. Everything stays familiar - it simply adds a layer of awareness on top.

SURESECURE™

GEOFENCE

SMART ALERT

HOW DOES THE GEOFENCE SMART ALERT WORK?

Whether you're rushing out of the house to work or taking the kids to school, the Kubu app will prevent you from getting too far away from your home with your windows left open. With the geofence smart alert reminding you that you've left your home unsecure, you'll simply be able to turn back home and lock up.

RECEIVE

REAL-TIME

NOTIFICATIONS

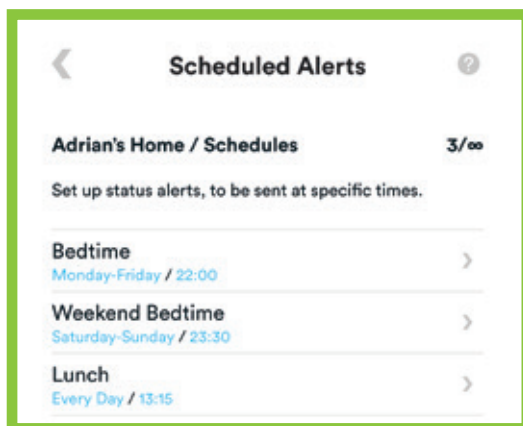

With Kubu's app, you can always see the status of your sliding sash windows - whether they are open, closed, or being moved from their current position.

Leave a window open to let fresh air in without losing confidence. When an armed sash detects unexpected movement, you'll receive an instant notification through the app.

A Kubu Home Hub is required to enable remote notifications when you're

away from home, connecting your sensors to your home WiFi for real-time updates via the internet.

Without a Home Hub, you can still view your window status locally via Bluetooth when you're within range of your home.

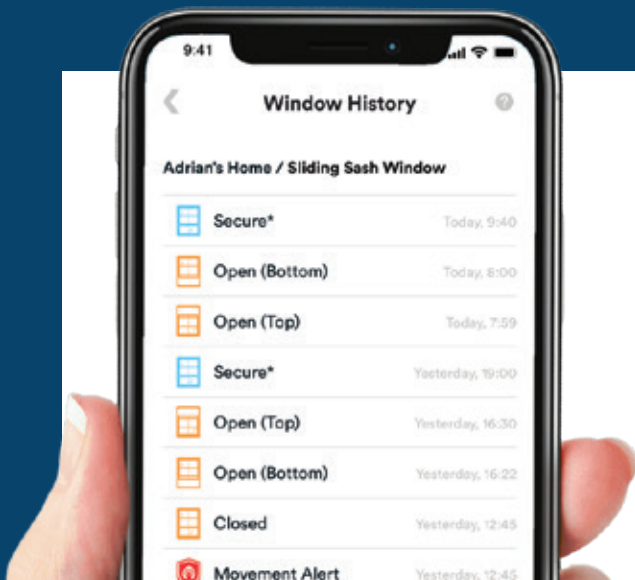

SET SCHEDULES

The Kubu app allows you to set scheduled reminders at times that suit you.

Simply choose a day and time, and Kubu will send you a notification confirming the status of your windows.

Whether it's a bedtime reminder or a nudge for the kids to let in some fresh air, you can set schedules that fit around your routine.

CHECK BACK THROUGH YOUR HISTORY

Kubu allows you to look back through your sensor history at any time.

The app provides a 7-day log of all activity recorded by your windows and doors.

You can see a clear time and date record of every change in status - whether a window was opened, closed, moved, or left in vent mode.

SHARE SENSOR STATUSES

The Kubu App allows you to share sensor statuses with family and friends, so everyone can stay informed about whether a home is secure.

For example, if you want to help an elderly relative feel more confident at night, they can share their sensors with you - allowing you to check the status of their windows whenever needed.

Status Sharing is ideal for:

-  Busy families
-  Elderly relatives
-  People who travel often
-  Second homes or rental properties

KUBU HOME HUB

To unlock your sliding sash windows' full "away from home" smart features, a Kubu Home Hub is required.

Without a Home Hub, you can still view your window status locally via Bluetooth when you're within range of your home.

When a Home Hub is added, your sensors connect to your home WiFi, enabling real-time notifications to be sent through the internet - meaning you can receive updates wherever you are in the world.

So, whether you're at work, on holiday, or out for the day, you'll always know the status of your windows.

PROTECTING MORE THAN JUST YOUR HOME

Kubu is built to the highest UK and international cyber security standards. So whether it's your family or your data - you're always in safe hands.

SMART HOME INTEGRATION

Legacy Protect is more than a smart sash window security system - it integrates seamlessly into your connected home.

Working with Kubu, it can link into other smart home devices such as lighting, heating, and voice assistants like Amazon Alexa.

With simple voice commands, you can check the status of your sliding sash windows at any time:

"Alexa, ask Kubu when the bedroom window was last opened."

"Alexa, ask Kubu if my windows are secure."

"Alexa, ask Kubu for the status of my living room window."

It's an easy way to stay connected to your home - even when you're not in the room.

Kubu works with

GET SENSORS

*Get your
sensors here*

Kubu sensors and the Home Hub are available to purchase directly from www.getkubu.com/legacy-protect

Please note, each sliding sash window requires its own sensor. A standard window with two operating sashes will require two sensors.

Once purchased, your sensors can be fitted to your windows whenever you're ready. Each kit includes easy-to-follow instructions and video guides.
